TRENDS AND SOURCES OF ZOONOSES AND ZONOTIC AGENTS IN FOODSTUFFS, ANIMALS AND FEEDINGSTUFFS

including information on foodborne outbreaks,
antimicrobial resistance in zoonotic and indicator bacteria
and some pathogenic microbiological agents

IN 2014

PREFACE

This report is submitted to the European Commission in accordance with Article 9 of Council Directive 2003/99/EC*. The information has also been forwarded to the European Food Safety Authority (EFSA).

The report contains information on trends and sources of zoonoses and zoonotic agents in Spain during the year 2014.

The information covers the occurrence of these diseases and agents in animals, foodstuffs and in some cases also in feedingstuffs. In addition the report includes data on antimicrobial resistance in some zoonotic agents and indicator bacteria as well as information on epidemiological investigations of foodborne outbreaks. Complementary data on susceptible animal populations in the country is also given. The information given covers both zoonoses that are important for the public health in the whole European Union as well as zoonoses, which are relevant on the basis of the national epidemiological situation.

The report describes the monitoring systems in place and the prevention and control strategies applied in the country. For some zoonoses this monitoring is based on legal requirements laid down by the European Union legislation, while for the other zoonoses national approaches are applied.

The report presents the results of the examinations carried out in the reporting year. A national evaluation of the epidemiological situation, with special reference to trends and sources of zoonotic infections, is given. Whenever possible, the relevance of findings in foodstuffs and animals to zoonoses cases in humans is evaluated.

The information covered by this report is used in the annual European Union Summary Reports on zoonoses and antimicrobial resistance that are published each year by EFSA.

* Directive 2003/ 99/ EC of the European Parliament and of the Council of 12 December 2003 on the monitoring of zoonoses and zoonotic agents, amending Decision 90/ 424/ EEC and repealing Council Directive 92/ 117/ EEC, OJ L 325, 17.11.2003, p. 31

|--|----|
| TEXTFORMS | 3 |
| 1 ANIMAL POPULATIONS | 3 |
| 1.1.1 Information on susceptible animal population | 3 |
| 2 DISEASE STATUS | 4 |
| 2.1 TUBERCULOSIS, MYCOBACTERIAL DISEASES | 4 |
| 2.1.1 General evaluation of the national situation | 4 |
| 2.1.1.1 Mycobacterium - general evaluation | 4 |
| 2.1.2 Mycobacterium in animals | 4 |
| 2.1.2.1 M. bovis in animal - Cattle (bovine animals) | 4 |
| 2.2 BRUCELLOSIS | 6 |
| 2.2.1 General evaluation of the national situation | 6 |
| 2.2.1.1 Brucella - general evaluation | 6 |
| 2.2.2 Brucella in animals | 7 |
| 2.2.2.1 B. abortus in animal - Cattle (bovine animals) | 7 |
| 2.2.2.2 B. melitensis in animal - Goats | 9 |
| 2.2.2.3 B. melitensis in animal - Sheep | 10 |
| 3 INFORMATION ON SPECIFIC ZOONOSES AND ZOONOTIC AGENTS | 13 |
| 3.1 SALMONELLOSIS | 13 |
| 3.1.1 General evaluation of the national situation | 13 |
| 3.1.1.1 Salmonella - general evaluation | 13 |
| 3.1.2 Salmonella in foodstuffs | 13 |
| 3.1.2.1 Salmonella spp. in food - Meat from bovine animals | 13 |
| 3.1.2.2 Salmonella spp. in food - Meat from broilers (<i>Gallus gallus</i>) | 14 |
| 3.1.2.3 Salmonella spp. in food - Meat from pig | 14 |
| 3.1.2.4 Salmonella spp. in food - Eggs | 15 |
| 3.1.3 Salmonella in animals | 16 |
| 3.1.3.1 Salmonella spp. in animal - Cattle (bovine animals) | 16 |
| 3.1.3.2 Salmonella spp. in animal - <i>Gallus gallus</i> (fowl) - broilers | 16 |
| 3.1.3.3 Salmonella spp. in animal - Pigs | 18 |
| 3.1.3.4 Salmonella spp. in animal - <i>Gallus gallus</i> (fowl) - laying hens | 18 |
| 3.1.3.5 Salmonella spp. in animal - <i>Gallus gallus</i> (fowl) - breeding flocks, unspecified | 20 |
| 3.1.3.6 Salmonella spp. in Turkeys - breeding flocks and meat production flocks | 21 |
| 3.2 CAMPYLOBACTERIOSIS | 23 |
| 3.2.1 General evaluation of the national situation | 23 |
| 3.2.1.1 Thermophilic <i>Campylobacter</i> spp., unspecified - general evaluation | 23 |
| 3.2.2 <i>Campylobacter</i> in foodstuffs | 23 |
| 3.2.2.1 Thermophilic <i>Campylobacter</i> spp., unspecified in food - Meat from broilers (<i>Gallus gallus</i>) | 23 |
| 3.2.3 <i>Campylobacter</i> in animals | 24 |
| 3.2.3.1 <i>Campylobacter</i> spp., unspecified in animal - Turkeys - fattening flocks - Monitoring - EFSA specifications | 24 |
| 3.2.3.2 Thermophilic <i>Campylobacter</i> spp., unspecified in animal - Cattle (bovine animals) | 24 |
| 3.2.3.3 Thermophilic <i>Campylobacter</i> spp., unspecified in animal - Pigs - fattening pigs | 25 |
| 3.2.3.4 Thermophilic <i>Campylobacter</i> spp., unspecified in animal - <i>Gallus gallus</i> (fowl) | 26 |
| 3.3 LISTERIOSIS | 27 |
| 3.3.1 General evaluation of the national situation | 27 |
| 3.3.1.1 <i>Listeria</i> - general evaluation | 27 |
| 3.4 E. COLI INFECTIONS | 28 |
| 3.4.1 General evaluation of the national situation | 28 |
| 3.4.1.1 Verotoxigenic <i>E. coli</i> (VTEC) - general evaluation | 28 |
| 3.4.2 <i>Escherichia coli</i> , pathogenic in animals | 28 |
| 3.4.2.1 Verotoxigenic <i>E. coli</i> (VTEC) in animal - Cattle (bovine animals) | 28 |
| 3.5 YERSINIOSIS | 29 |
| 3.5.1 General evaluation of the national situation | 29 |
| 3.5.1.1 <i>Yersinia</i> - general evaluation | 29 |
| 3.5.2 <i>Yersinia</i> in animals | 30 |
| 3.5.2.1 <i>Yersinia</i> in animal - Pigs | 30 |

1 ANIMAL POPULATIONS

The relevance of the findings on zoonoses and zoonotic agents has to be related to the size and nature of the animal population in the country

1.1.1 Information on susceptible animal population

Sources of information

REGA (National Register for Livestock Holdings) was the source for the total number of holdings and animals in all species. The figures in this report were taken at December/31/2014.

Dates the figures relate to and the content of the figures

Number of holdings and animals: 31/12/2014

Definitions used for different types of animals, herds, flocks and holdings as well as the types covered by the information

'holding' in REGA means 'Whatever place where farming animals are'. They are classified in breeding and production holdings and special holdings (such as markets, slaughterhouses, quarantine centers, ...). It have been taken into account only breeding and production holdings. The specific definitions adopted by REGA for different types of holdings are those fixed in EU or Spanish Regulations. Bovine animals
Calves for slaughter: Bovine animals less than 1 year old for slaughter as calves. Calves: Domestic animals of the bovine species, of not more than 300 kg live weight and not yet having permanent teeth.
Heifers: Female bovines more than 1 year old that have not yet calved.
Heifers for breeding purposes: Heifers raised for breeding and intended to replace dairy cows.
Cows: Female bovines that have calved
Dairy cows: Cows kept exclusively or principally for the production of milk for human consumption and/or dairy produce.
Meat production animals: bovine animals, other than calves, kept exclusively for the production of meat and including cows, heifers and bulls
Sheep: Domestic animals of the species Ovis.
Ewes and ewe lambs put to the ram: Females of the ovine species which have already lambed at least once as well as those which have been put to the ram for the first time.
Milk ewes: Ewes which are kept exclusively or principally to produce milk for human consumption and/or for processing into dairy products. This includes cast milk sheep (whether fattened or not between their last lactation and slaughtering).
Other ewes: Ewes other than milk ewes; to be included in meat production animals
Lambs: Male or female sheep under 12 months old
Goats: domestic animals of the species Capra.
Pigs: Domestic animals of the species Sus.

2 DISEASE STATUS

2.1 TUBERCULOSIS, MYCOBACTERIAL DISEASES

2.1.1 General evaluation of the national situation

2.1.1.1 Mycobacterium - general evaluation

History of the disease and/or infection in the country

Sanitary importance of bovine tuberculosis has been based in the spread of the disease to humans. Human infection has been linked historically to raw milk consumption. At human level the surveillance of the disease is included in National Net of Epidemiological Surveillance, according with Royal Decree 2210/1995, december 25, by Epidemiological Surveillance National Net is created. In Spain, control of milk was carried out at council town's level since 1908, but monitoring and eradication programmes in cattle didn't start systematically until beginning of 90's, focused mainly in dairy cows. At the moment the programme is being applied to cattle over six weeks of age, and to goats living close to cattle, according to Directive 64/432/EEC. Control of milk and control of fresh meat production is carried out by Autonomous Communities according to European legislation in force (hygiene package).

National evaluation of the recent situation, the trends and sources of infection

Spanish programmes for eradication on bovine tuberculosis in last years show the low level of increase of the disease prevalence in cattle. In 2013 herd prevalence was 1,72% (1,39% in 2013; 1,31% in 2012; 1,33% in 2011, 2,14% in 2003, 1,80% in 2004, 1,54% in 2005, 1,76% in 2006 and 1,68% in 2007, 1,59% in 2008, 1,65% in 2009; 1,51% in 2010), with 97,16% of herds qualified as officially free (97,14% in 2013; 97,27% in 2012; 95,77% in 2003, 96,56% in 2004, 97,34% in 2005, 96,94% in 2006, 97,20% in 2007, 97,21% in 2008, 96,53% in 2009; 96,49% in 2010; 96,40% in 2011). Animal prevalence in 2014 was 0,41% (0,47% in 2003, 0,40% in 2004, 0,31% in 2005, 0,42% in 2006, 0,49% in 2007, 0,48% in 2008 and 0,41% in 2009; 0,36% in 2010; 0,28% in 2011; 0,23 in 2012; 0,28% in 2013). Raw milk only can be consumed if produced in herds OTF.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

Only few human cases had been identified as tuberculosis by *Mycobacterium bovis* in the last years. The risk of transmission from animals to humans is very low.

Recent actions taken to control the zoonoses

Spanish Programme on Eradication of Bovine Tuberculosis 2014. Milk control and fresh meat control production are developed according to European legislation in force (Hygiene Package).

Additional information

M. caprae has been isolated in 2005-2014 from cattle, goats, wild boars, foxes, wild ruminants.

2.1.2 Mycobacterium in animals

2.1.2.1 *M. bovis* in animal - Cattle (bovine animals)

Monitoring system

Sampling strategy

Sampling strategy is defined in Spanish Programme on Eradication on Bovine Tuberculosis 2014, covering cattle according Directive 64/432/EEC(animals over six weeks of age) and goats living close to cattle. Testing is performed under supervision of competent authorities of Autonomous Communities. At slaughterhouses samples are taken in suspicious animals and in animals with suspicious injuries. Strategic use on gamma-interferon assay has been implemented since 2008 and consequently, an increase in the sensitivity at animal level (intra-herd) has been applied. A total of 154.443 gamma-interferon tests have been performed in 2013. Additionally, severe interpretation of skin test(SIT) has been applied in high prevalence areas, with 2 skin tests in OTF herds and at least 3 skin tests in non-OTF herds during 2014. These measures have increased the sensitivity at herd level as well. More than 209.000 pre-movement tests have been performed in 2014.

Frequency of the sampling

Once a year at least, more frequent testing in not officially free herds (at least 3 tests) and in OTF herds in high prevalence areas (2 at least). Pre-movement test in movements except if animals go to a closed fattening unit that exclusively send animals to a slaughterhouse.

Type of specimen taken

skin test, blood, organs/tissues

Methods of sampling (description of sampling techniques)

Intradermal skin test (SIT) is used in animals over 6 weeks of age. In infected herds, gamma interferon assay is used in parallel as supplementary test in animals over six months of age. In low prevalence areas, SICCT can be used if specificity problems are detected. At slaughterhouses organs/tissues are taken from suspicious reactors animals (mainly from herds with OTF status suspended) and from injuries found in routine post-mortem examination of animals slaughtered, according to the European legislation in force (Hygiene Package).

Case definition

skin test: positive and inconclusive results. In OTF herds also M. bovis isolation. Gamma-interferon: positive results, cut-off value 0,05. Organs/tissues: compatible lesions, auramine+, isolation or positive PCR

Diagnostic/analytical methods used

SIT, SICCT, agent isolation, PCR and gamma-interferon assay following criteria laying down by Annex B of Directive 64/432/EEC. compatible lesions, auramine+, isolation or positive PCR, spoligotyping, VTNR

Vaccination policy

Forbidden

Other preventive measures than vaccination in place

Premovement test; Cleaning and disinfecting of positive holdings; Control of common grazing areas; Investigation of wildlife in some regions; Epidemiological investigations in breakdowns; inspections and official control of the field veterinarians.

Control program/mechanisms

The control program/strategies in place

Spain has an Eradication Programme approved for co-financing according to Decision 2013/722/UE. Legal basis of the programme measures is Council Directive 64/432/EEC, but with increased measures like:- more frequent tests in high prevalence areas- strategic use of gamma-interferon assay- pre-movement test- severe interpretation of SIT

Recent actions taken to control the zoonoses

More frequent testing and pre-movement test
Compulsory slaughtering of all animals in herds with high incidence or repeating positive results
Severe interpretation of tuberculin test
Research into other test methodologies
Reinforce over herd registers at farm level
Epidemiological studies
Surveillance of wildlife
Inspections in restricted herds
Inspections of field veterinarians
Training courses for field veterinarians

Suggestions to the European Union for the actions to be taken

Research into other test methodologies and improve the existing ones.

Measures in case of the positive findings or single cases

Confirmation by isolation/PCR of M. bovis. If confirmed, withdrawal of OTF status by holding. Epidemiological studies, spoligotyping of the strain and inclusion in the National Database micoDB.es.

Notification system in place

Since 1952, at least (Epizootic Diseases Law).At the moment by Animal Health Law 8/2003

Results of the investigation

Herd prevalence: 1,72%Animal prevalence: 0,41%Herd incidence: 0,90%Status of herds: 97,27% OTF

National evaluation of the recent situation, the trends and sources of infection

Data obtained by applying of Spanish Tuberculosis Eradication and Monitoring Programme show a moderate increase of the disease at herd level and at animal level in the country in 2014.Trend analysis show an increasing trend between 20010 and 2014, with an annual rate of increase is 3,04% (95% C.I. for relative change = -5,50 to +12,46%).In dairy herds, the disease is close to eradication, with a herd prevalence of 0,50%. In conclusion, milk consumption can not be considered as a current source of infection in Spain,even more if it is assumed that cow milk is thermally treated.In herds for meat production, herd prevalence is 1,91%. Explanation of this higher prevalence can be found in special management of this kind of herds: common grazing, ranching systems, fighting bulls, trashumance... Wildlife and goats can also be a source of infection in these holdings. The increase in the diagnostic sensitivity in 2008-2014 has important influence in the herd prevalence and incidence, that are higher than other programmes that use less sensitivity diagnostic strategies. Then, comparations between programmes with different diagnostic strategies have to be carefully explained and interpreted.

2.2 BRUCELLOSIS

2.2.1 General evaluation of the national situation

2.2.1.1 Brucella - general evaluation

History of the disease and/or infection in the country

Sanitary importance of brucellosis has been based in the spread of the disease to humans.At the moment brucellosis is still the main direct transmission zoonoses in the world, and in Spain as well, mainly linked to Brucella melitensis.The more frequent source of infection for human beings have been contacts with goats and sheeps, but raw milk products consumption have had historical importance as well.Nowadays brucellosis is considered as a professional disease.In Spain, milk control was carried out at council town's level since 1908. At the moment milk control and control of fresh meat production is carried out by Autonomous Communities according to the european legislation in force (Hygiene Package). Monitoring and Eradication Programmes in cattle, goats and sheep didn't start systematically until begining of 90's.Before, human cases had the highest incidence in last thirty years, with around 8500 cases in middle 80s.The systematic application of national programmes has resulted in a continuous decrease of the disease in humans.At the moment the Programmes are being applied according to Directive 64/432/EEC and Directive 91/68/EEC.At human level disease brucellosis is a mandatory notifiable disease since 1943. It is included in National Network of Epidemiology Surveillance, (Royal Decree 2210/1995, december 25), by Epidemiological Surveillance National Net is created.

National evaluation of the recent situation, the trends and sources of infection

Spanish Programmes for eradication and monitoring of Brucellosis in cattle, goats and sheeps show the continuous decreasing trend, in general, of the disease prevalence in domestic animals. In 2014 herd prevalence was 0.05% (1.45% in 2003; 1.54% in 2004; 1.25% in 2005; 0.84% in 2006; 0.57% in 2007; 0.40% in 2008; 0.32% in 2009; 0.20% in 2010; 0.12% in 2011; 0.08 in 2012 and 2013) in cattle and 0.15% (5.58% in 2003; 5.12% in 2004; 4.43% in 2005; 3.20% in 2006; 2.79% in 2007; 2.11% in 2008; 1.64% in 2009; 0.89% in 2010; 0.54% in 2011; 0.26% in 2012; 0.17% in 2013) in goats and sheep. Animal prevalence was 0.01% (0.45% in 2003; 0.59% in 2004; 0.37% in 2005; 0.22% in 2006; 0.13% in 2007; 0.09% in 2008; 0.07% in 2009; 0.05% in 2010; 0.02% in 2011; 0.01% in 2012; 0.03% in 2013) in cattle and 0.02% (0.87% in 2003; 0.62% in 2004; 0.45% in 2005; 0.34% in 2006; 0.25% in 2007; 0.15% in 2008; 0.11% in 2009; 0.07% in 2010; 0.04% in 2011; 0.03% in 2012; 0.03% in 2013) in goats and sheep.Raw milk only can be consumed if produced in herds free or officially free.

Recent actions taken to control the zoonoses

Spanish Programme on eradication of bovine brucellosis 2014.Spanish Programme on eradication of brucellosis in goats and sheep 2014.Milk control and control of the production of fresh meat in accordance to european legislation in force (Hygiene Package).Furthermore, the Spanish Royal Decree 640/2006, of May 26, 2006, laying down specific implementation conditions of the Community rules concerning hygiene subjects, as well as foodstuff's production and commercialisation, establishes specific conditions regarding to milk and dairy milk.

Additional information

Since 1992, there has been a sharp decline in the number of human cases, marking the beginning of a new phase of low incidence that has been maintained over the last 15 years. The fluctuations in the human incidence are due to sporadic outbreaks.

2.2.2 Brucella in animals

2.2.2.1 B. abortus in animal - Cattle (bovine animals)

Status as officially free of bovine brucellosis during the reporting year

Free regions

The 2 provinces of the Canary Islands since june 2009; Baleares, Murcia, La Rioja and Pas Vasco since 2013.

Monitoring system

Sampling strategy

Sampling strategy is defined in Spanish Programme for Eradication of Bovine Brucellosis, covering cattle according to Directive 64/432/EEC(animals over 12 months of age). Test are carried out by competent authorities of Autonomous Communities. At slaughterhouses samples are taken in suspicious animals, mainly in positive animals coming from free or officially free herds (suspended status) to confirm the disease.

Frequency of the sampling

Twice a year at least. Only regions with low herd prevalence can apply a reduction of the frequency following Annex A.II.2 of Council Directive 64/432/CEE.Pre-movement test.

Type of specimen taken

serum, blood, milk, organs/tissues,swabs

Methods of sampling (description of sampling techniques)

In animals over one year of age Rose Bengal as screening test or i-ELISA in milk; and Complement Fixation test or i-ELISA in serum as confirmatory test. As complementary test competition ELISA has been used as well. At slaughterhouses swabs, organs and tissues are taken in suspicious animals, mainly from herds with free or officially free status suspended, to isolate Brucella and confirm the infection.

Case definition

Positive result to Rose Bengal test confirmed by positive result to Complement Fixation test or ELISA. In high prevalence areas, positive result to any official test. In free or officially free herds Brucella abortus isolation as well. Positive result of i-Elisa in milk confirmed by serological methods.

Diagnostic/analytical methods used

Rose Bengal test ,agent isolation,serum i-ELISA, milk i-ELISA, c-ELISA and Complement Fixation test, following criteria laying down by Annex B of Directive 64/432/EEC

Vaccination policy

Forbidden in general, but in high prevalence areas vaccination can be authorised with vaccine B-19 or other authorised vaccines(RB-51)according to Directive 64/432/EEC.

Other preventive measures than vaccination in place

Pre-movement testCleaning and disinfecting of positive holdingsControl of common grazing areasInvestigation of possible wildlife reservoirs in some regionsEpidemiological investigations in breakdownsInspections and official control of field veterinariansInspections of restricted herds.

Control program/mechanisms

The control program/strategies in place

Spain has an Eradication and Monitoring Programme approved for co-financing according to Decision 2013/722/UE.Legal basis of the programme measures is Directive 64/432/EEC and Royal Decree 2611/1996, at last ammended. Increased measures have been implemented:pre-movement test stamping out in low prevalence areasvaccination in high prevalence areasmore frequent testinginspections and official controls of field veterinariansinspections of restricted herds

Recent actions taken to control the zoonoses

More frequent testing and pre-movement testCompulsory slaughter of all animals in herds with high incidence or repeating positive results, and in low prevalence areas if infection is confirmedResearch into other test methodologiesReinforce over herd registers at farm levelEpidemiological studies

Suggestions to the European Union for the actions to be taken

Research into other test methodologies and improve existing ones.

Measures in case of the positive findings or single cases

Confirmation of the infection by complement fixation test and culture, and if herd is free or officially free,status is suspended and if isolation of Brucella abortus is confirmed, lost of status by holding and, if the herd is placed in a low plevelence area, depopulation.

Notification system in place

Since 1952, at least(Epidemic Diseases Law)At the moment by Animal Health Law 8/2003

Results of the investigation

Herd prevalence: 0,05%Animal prevalence: 0,01%Herd incidence: 0,03%Herd status: 98.80% OBF; 0,46% BF

National evaluation of the recent situation, the trends and sources of infection

Data obtained by the implementation of Spanish Eradication and Monitoring Programme on Bovine Brucellosis show a moderate increase of the disease in the country in 2004, following by an important decrease in 2005, 2006 and mainly in 2007, 2008, 2009,2010, 2011, 2012 and 2014. Herd prevalence: 2,30%(2002);1,45%(2003);1,54(2004); 1,25%(2005); 0,84%(2006); 0,57 (2007); 0,40(2008); 0,32%(2009); 0,20%(2010); 0,12%(2011);0,08(2012 and 2013); 0,05 (2014)Animal prevalence: 0,39%(2002);0,45%(2003);0,59%(2004); 0,37% (2005); 0,22(2006); 0,13(2007); 0,09(2008); 0,07(2009); 0,05%(2010); 0,02% (2011); 0,01 (2012); 0,03 (2013); 0,01 (2014).Disease is close to eradication in dairy herds.Herd prevalence is below 1%(0,01%).In conclusion, milk consumption can't be considered as a current source of infection in Spain, even more if it is assumed that almost all the cow milk is thermally treated.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

Brucellosis in humans is linked in Spain mainly to *B. melitensis*.

2.2.2.2 *B. melitensis* in animal - Goats

Status as officially free of caprine brucellosis during the reporting year

Free regions

2.2.2.3 B. melitensis in animal - Sheep

Status as officially free of ovine brucellosis during the reporting year

Free regions

Canarias by Decision 2001/292/EC Baleares by Decision 2010/695/EU Galicia, Asturias, Cantabria, Castilla y Leon and Pais Vasco since 2013 and Navarra since 2014.

Monitoring system

Sampling strategy

Sampling strategy is defined in Spanish Programme on eradication and monitoring of brucellosis in sheep and goats, according to Directive 91/68/EEC:- animals over 6 months of age if not vaccinated- animals over 18 months of age if vaccinated Tests are carried out by competent authorities of Autonomous Communities. At slaughterhouse samples are taken in suspicious animals, mainly in positive animals coming from free or officially free herds(suspended status) to confirm de disease.

Frequency of the sampling

Once a year at least in herds free or officially free.Twice a year at least in non qualified herds.

Type of specimen taken

serum, blood, milk, organs/tissues

Methods of sampling (description of sampling techniques)

At herd level, in animals over 6 or 18 months of age Rose Bengal as screening test and Complement Fixation as confirmatory test. At slaughterhouses or at holdings, swabs, milk, organs or tissues are taken in suspicious animals, mainly from herds with free or officially free status suspended, to isolate Brucella and confirm the infection.

Case definition

Positive result to Rose Bengal confirmed by positive result to Complement Fixation. In infected herds, positive results to any official test. In free or officially free herds Brucella melitensis isolation as well.

Diagnostic/analytical methods used

Rose Bengal test, agent isolation, Complement Fixation test following criteria laying down by Annex C of Directive 91/68/EEC

Vaccination policy

Animals between 3 and 6 months of age (not in officially free herds or free herds that are on the way to gain officially free status in low prevalence areas) In high incidence areas adults can be vaccinated exceptionally to control the spread of the disease to other herds or humans.

Other preventive measures than vaccination in place

Pre-movement test in trashumance in certain areas
Cleaning and disinfecting of positive holdings
Control of common grazing areas
Epidemiological investigations in breakdowns
Inspections and official control of the field veterinarians

Control program/mechanisms

The control program/strategies in place

Spain has an Eradication Programme approved for co-financing according to Decision 2013/722/UE. Legal basis of the programme measures are Directive 91/68/EEC and Royal Decree 1941/2004.

Recent actions taken to control the zoonoses

More frequent testing in non qualified herds
Compulsory slaughter of all animals in herds with high incidence or repeating positive results
Research in other test methodologies
Reinforce over herd register at farm level
Epidemiological studies

Suggestions to the European Union for the actions to be taken

Research into other test methodologies and into other vaccines. Authorisation of new tests (ELISA,FPA)

Measures in case of the positive findings or single cases

Confirmation by complement fixation test, and if herd free or officially free, status is suspended and if isolation of Brucella melitensis, lost of status by holding and depopulation if herd is placed in low prevalence area

Notification system in place

Since 1952, at least(Epizootic Diseases Law)At the moment by Animal Health Law 8/2003

Results of the investigation

Herd prevalence: 0.15%
Animal prevalence: 0,02%
Herd incidence: 0,12%
Herd status: 85,24% OMF; 12,71% free

National evaluation of the recent situation, the trends and sources of infection

Data obtained by implementation of Spanish Programme for Eradication and Monitoring of Brucellosis in Sheep and Goats show continuous decreasing trend of the disease in the country, following the trends of previous years:
Herd prevalence: 7,18% (2002); 5,58% (2003); 5,12% (2004); 4,43% (2005); 3,20% (2006); 2,79% (2007); 2,11% (2008); 1,64% (2009); 0,89% (2010); 0,54% (2011); 0,26% (2012); 0,17% (2013); 0,15% in 2014.
Animal prevalence: 0,98% (2002); 0,87% (2003); 0,61% (2004); 0,45% (2005); 0,34% (2006); 0,25% (2007); 0,15% (2008); 0,11% (2009); 0,07% (2010); 0,04% (2011); 0,03% (2012 and 2013); 0,02% in 2014.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

The human cases have been identified mainly as *Brucella melitensis*, caused by direct contact between humans and infected herds, as a professional disease (farmers, veterinary surgeons...).

3 INFORMATION ON SPECIFIC ZOONOSES AND ZOONOTIC AGENTS

Zoonoses are diseases or infections, which are naturally transmissible directly or indirectly between animals and humans. Foodstuffs serve often as vehicles of zoonotic infections. Zoonotic agents cover viruses, bacteria, fungi, parasites or other biological entities that are likely to cause zoonoses.

3.1 SALMONELLOSIS

3.1.1 General evaluation of the national situation

3.1.1.1 Salmonella - general evaluation

History of the disease and/or infection in the country

Salmonellosis is the second main zoonoses (in number of human cases) in European Union, also in Spain. Salmonella is the agent more frequently involved in foodborne outbreaks in Spain. In poultry, after the introduction in the 60's of the American production method, the specific pathology of avian salmonellosis was caused by *S. pullorum* and *S. gallinarum*. In the middle of the 80's came up a new infection in breeding flocks for meat production caused by *S. enteritidis*, and following it, also in laying hens and in feed. *S. enteritidis* was isolated.

National evaluation of the recent situation, the trends and sources of infection

Nowadays the sources of infection are widespread along the food chain: feed, animals, food(eggs and ovo-products, meat) and humans can be a source of infection. At animal level, data in breeding flocks for *Salmonella* spp are (from 0.78% in 2013 to 4.31 in 2014) and of top 5 serovars (from 0.39% in 2013 to 0.52 in 2014). Spain have reached the community target in 2014. In laying hens, flock incidence decreased from 8.76% to 7.66% (*Salmonella* spp.) and SE/ST decreased from 1.87% in 2013 to 1.18% in 2014 (adult flocks). In broiler flocks, the flock prevalence increased from 3.2% in 2013 (*Salmonella* spp.) to 3.63% in 2014, the prevalence of *S. Enteritidis* and *S. Typhimurium* was 0.06% in 2013 and 0.11% in 2014. In breeding turkeys the prevalence of SE/ST, including monophasic strains in 2014 was 0%. In fattening turkeys the prevalence of SE/ST, including monophasic strains in 2014 was 0.25%. Data indicate that we have reached the prevalence target in poultry in Spain in 2014. At human level salmonellosis is a notifiable disease according to Royal Decree 2210/1995, laying down Epidemiological Surveillance National Network According to Royal Decree 328/2003, laying down the Poultry Health Plan, all veterinarians have to notify to the Competent Authority cases of zoonoses and zoonotic agents.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

It is very difficult to establish the relevance of the data in the different steps of the food chain as sources of infection, because epidemiology of salmonellosis is very complex. Nevertheless, human cases are mainly linked to eggs and egg derived food consumption.

Recent actions taken to control the zoonoses

Ministry of Agriculture, Food and Environment and Ministry of Health, Social Policy and Equality of Spain are carrying out a Control Programme of *Salmonella* in poultry, eggs and ovo-products along the overall food chain, starting with monitoring systems at holdings (National Surveillance Programme).

Additional information

Spanish legislation on *Salmonella* in foodstuff: Royal Decree 1254/1991 of August 2, laying down rules to preparation and conservation of mayonnaise prepared in the own establishment and for immediate consumption foods with eggs as ingredient. Royal Decree 3484/2000 of December 29, laying down hygiene rules to elaboration, distribution and commercialisation of ready-to-eat food. Royal Decree 640/2006, of May 26, 2006, laying down specific implementation conditions of the Communities rules concerning hygiene subjects, as well as foodstuff's production and commercialisation.

3.1.2 *Salmonella* in foodstuffs

3.1.2.1 *Salmonella* spp. in food - Meat from bovine animals

Monitoring system

Sampling strategy

At slaughterhouse and cutting plant

The activities are made pursuant to Regulation (EC) no 178/2002. (i.e. rapid alert system, traceability of food, feed, food-producing animals and all substances incorporated into foodstuffs must be established at all stages of production, processing and distribution. To this end, business operators are required to apply appropriate systems and procedures.

Frequency of the sampling

At meat processing plant

Sampling distributed evenly throughout the year

At retail

Sampling distributed evenly throughout the year

Methods of sampling (description of sampling techniques)

Diagnostic/analytical methods used

3.1.2.2 *Salmonella* spp. in food - Meat from broilers (*Gallus gallus*)

Monitoring system

Sampling strategy

Egg products (at production plant and at retail)

Sampling distributed evenly throughout the year

Diagnostic/analytical methods used

Control program/mechanisms

Recent actions taken to control the zoonoses

In 2003 a workshop was organised for "Salmonella in eggs and egg products" coordinated by the Spanish Food Safety and Nutrition Agency. The result was the approval between all the competent authorities in this area of the "Programme on Salmonella spp in eggs and egg products".

3.1.3 Salmonella in animals

3.1.3.1 Salmonella spp. in animal - Cattle (bovine animals)

Monitoring system

Sampling strategy

Samples have been taken randomly (day of sampling each month) in 18 slaughterhouses (distribution of the number of samples according to the capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative of the total volume of sacrifice of the country (around 52,8%) in the year 2013.

Frequency of the sampling

Animals at slaughter (herd based approach)

from April to October 2013

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Results of the investigation

Number of slaughter batches analyzed: 232Positive : 8 Salmonella spp.slaughter batch prevalence: 1,7% in 2013

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years. Then, the next monitoring programme will be performed in 2015.

3.1.3.2 Salmonella spp. in animal - Gallus gallus (fowl) - broilers

Monitoring system

Sampling strategy

Broiler flocks

Following point 1 of the Annex of Commission Regulation (EC) 200/2012 implementing Regulation (EC) 2160/2003 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium* in broilers.

Frequency of the sampling

Broiler flocks: Before slaughter at farm

3 weeks prior to slaughter (FBO control). Official control sampling is performed in at least one flock on 10% of the holdings with more than 5000 birds.

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Vaccination policy

Other preventive measures than vaccination in place

Control program/mechanisms

The control program/strategies in place

Recent actions taken to control the zoonoses

National Control and Monitoring Plan on *Salmonella* in broiler flocks 2014, including biosecurity measures and compliance with Good Practice Code following Regulations 2160/2003, 1177/2006 and 200/2012.

Measures in case of the positive findings or single cases

Notification system in place

Since 1952, at least (Epizootic Diseases Law). At the moment by Animal Health Law 8/2003, Royal Decree 328/2003 and Royal Decree 1940/2004.

Results of the investigation

Sampled flocks: 37.442 Positive flocks: 1.361 *Salmonella* spp. 44 *S. enteritidis*+*typhimurium*, including monophasic strains
Prevalence: *Salmonella* spp.: 3.63% *Enteritidis*+*Typhimurium*, including monophasic strains: 0,11%

National evaluation of the recent situation, the trends and sources of infection

Spain has already reached the community target, although there is a slight increase.

3.1.3.3 *Salmonella* spp. in animal - Pigs

Monitoring system

Sampling strategy

Breeding herds

Multiplying herds

Fattening herds

Samples have been taken randomly (day of each month) in 19 slaughterhouses (distribution of the number of samples according to the capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative of the total volume of sacrifice of the country (53%) in the year 2013.

Frequency of the sampling

Fattening herds at slaughterhouse (herd based approach)

between April and October 2013

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Results of the investigation

Fattening pigs at slaughterhouses: Tested slaughter batches: 230Positive: 69Slaughter batch prevalence: 30% *Salmonella* spp. in 2013.

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years. Then, the next monitoring programme will be performed in 2015.

3.1.3.4 *Salmonella* spp. in animal - *Gallus gallus* (fowl) - laying hens

Monitoring system

Sampling strategy

Laying hens flocks

Following point 2 of the Annex of Commission Regulation (EC) 517/2011 implementing Regulation (EC) 2160/2003 as regards a Community target for the reduction of the prevalence of certain salmonella serotypes in laying hens of Gallus gallus. This sampling strategy is implemented by the Spanish National Control and Monitoring Programme on Salmonella in Laying Hens 2013, approved by Commission Decision 2013/722/UE.

Frequency of the sampling

Laying hens: Day-old chicks

Every flock is sampled

Laying hens: Rearing period

2 weeks prior to moving to laying unit (FBO control).

Laying hens: Production period

Every 15 weeks (FBO control). Official control is done in one flock per year per holding comprising at least 1000 birds at the end of the production cycle; at the age of 24 +- 2 weeks in flocks housed in buildings where Salmonella was detected in the preceding flock; and in any case of suspicion of Salmonella in the holding.

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Vaccination policy

Other preventive measures than vaccination in place

Control program/mechanisms

The control program/strategies in place

Recent actions taken to control the zoonoses

National Control and Monitoring Programme on Salmonella in Laying Hens 2014, including vaccination, biosecurity measures and compliance with good practices code following criteria of Regulations 2160/2003, 517/2011 and 1177/2006.

Measures in case of the positive findings or single cases

Notification system in place

Since 1952 at least (Epizootic Diseases Law). At the moment by Animal Health Law 8/2003, Royal Decree 328/2003 and Royal Decree 1940/2004.

Results of the investigation

Number of flocks (adults) tested: 2.374 Number of positive flocks: - *Salmonella* spp.: 182 - Enteritidis+Typhimurium, including monophasic strains: 28 Prevalence: - *Salmonella* spp: 7.66% - Enteritidis+Typhimurium, including monophasic strains: 1.18%

National evaluation of the recent situation, the trends and sources of infection

The incidence of both *Salmonella* Enteritidis+Typhimurium, including monophasic strains has been 1.18 % in 2014. Spain has reached the community target for 2014.

3.1.3.5 *Salmonella* spp. in animal - *Gallus gallus* (fowl) - breeding flocks, unspecified

Monitoring system

Sampling strategy

Breeding flocks (separate elite, grand parent and parent flocks when necessary)

Following point 2 of the Annex of Commission Regulation (EU) 200/2010 of 10 March, implementing Regulation (EC) 2160/2003 as regards a Community target for the reduction of the prevalence of certain *Salmonella* serotypes in breeding flocks of *Gallus gallus*. This sampling strategy is implemented by the Spanish National Surveillance and Control Programme on *Salmonella* in Breeding Flocks of *Gallus gallus*, approved for co-financing by Commission Decision 2013/722/UE.

Frequency of the sampling

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Day-old chicks

Every flock is sampled

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Rearing period

birds of 4 weeks of age and 2 weeks prior movement to laying period.

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Production period

Other: FBO controls: every 2 weeks. Additionally to the FBO controls, during production period an official control sampling is performed, with the following frequency: 1. within 4 weeks following moving to the laying phase or laying unit 2. towards the end of the laying phase and not earlier than 8 weeks before the end of the production cycle 3. during the production period at time distant enough from the sampling referred in points 1. and 2.

Type of specimen taken

Methods of sampling (description of sampling techniques)

Breeding flocks: Production period

Following point 2 of the Annex of Commission Regulation (EU) 200/2010 of 10 March, implementing Regulation (EC) 2160/2003 as regards a Community target for the reduction of the prevalence of certain *Salmonella* serotypes in breeding flocks of *Gallus gallus*.

Case definition

Diagnostic/analytical methods used

Vaccination policy

Other preventive measures than vaccination in place

Control program/mechanisms

The control program/strategies in place

Recent actions taken to control the zoonoses

Compulsory National Control and Monitoring Programme on Salmonella in Breeding Flocks of Gallus gallus 2014.

Measures in case of the positive findings or single cases

Notification system in place

Since 1952, at least (Epizootic Diseases Law). At the moment by Animal Health Law 8/2006, Royal Decree 328/2003 and Royal Decree 1940/2004.

Results of the investigation

Sampled flocks (adults): 1716Positive flocks: 74 Salmonella spp.; 9 top 5Incidence:0.52%- Salmonella spp: 0.78%- Top 5: 0,39%

National evaluation of the recent situation, the trends and sources of infection

The incidence on Salmonella spp. has increased from 2013 (0.78%) to 2014 (4.31%) . The incidence on top 5 have increased from 2013 (0,39%) to 2014 (0.52%) . However, Spain has reached the Community reduction(<1%) target for 2014.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

Breeding flocks for egg production can be considered a very low source of infection for humans, with no positive flock to Salmonella

3.1.3.6 Salmonella spp. in Turkeys - breeding flocks and meat production flocks

Monitoring system

Sampling strategy

Breeding flocks (separate elite, grand parent and parent flocks when necessary)

Following points 1 and 2 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, in turkeys.

Meat production flocks

Following points 1 and 2 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, including monophasic strains in turkeys.

Frequency of the sampling

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Day-old chicks

Following point 1 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, including monophasic strains in turkeys.

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Rearing period

Following point 1 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, including monophasic strains in turkeys.

Breeding flocks (separate elite, grand parent and parent flocks when necessary): Production period

Other: Following points 1 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, including monophasic strains in turkeys.

Meat production flocks: Before slaughter at farm

Other: Following point 1 of the Annex of Commission Regulation (EC) 584/2008 as regards a Community target for the reduction of the prevalence of *Salmonella Enteritidis* and *Salmonella Typhimurium*, including monophasic strains in turkeys.

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Meat production flocks: Day-old chicks

Diagnostic/analytical methods used

Vaccination policy

Other preventive measures than vaccination in place

Control program/mechanisms

The control program/strategies in place

Recent actions taken to control the zoonoses

Compulsory National Control and Monitoring Programme on *Salmonella* in Breeding Flocks and Meat Production Flocks of Turkeys 2014, following criteria of Regulation (EC) 584/2008.

Notification system in place

Since 1952, at least (Epizootic Diseases Law). At the moment by Animal Health Law 8/2006, Royal Decree 328/2003 and Royal Decree 1940/2004.

Results of the investigation

Breeding turkeys: Number of adult flocks tested : 64 positive (*Enteritidis*+ *Typhimurium*, including monophasic strains): Opositive *Salmonella* spp.: 6 flock prevalence SE y ST: 0% flock prevalence *Salmonella* spp.: 9.37% Fattening turkeys: number of flocks tested: 3.150 positive (*Enteritidis*+ *Typhimurium*, including monophasic strains): 8 flock prevalence: 0.25% positive *Salmonella* spp.: 552 flock prevalence: 17.52%

National evaluation of the recent situation, the trends and sources of infection

In 2014, Spain has achieved the community target. Nevertheless, there is a slight increase of prevalence.

3.2 CAMPYLOBACTERIOSIS

3.2.1 General evaluation of the national situation

3.2.1.1 Thermophilic Campylobacter spp., unspecified - general evaluation

History of the disease and/or infection in the country

Campylobacter spp. is at the moment one of the most frequent causes of gastroenteritis in humans. Poultry are the main reservoir, and infection happens usually by consume of poultry meat. Until the end of the 60's importance of Campylobacter spp. was not valued. Notification of the disease is also infravaluated in surveillance systems. Epidemiology investigations associated cases to poultry meat consume and a deficient handle of food. The number of human cases in Spain is at the moment supported in the notifications made to Microbiology Information System (SIM).

National evaluation of the recent situation, the trends and sources of infection

Poultry meat is the main source of infection. Another food implicated are red meat, raw milk, non pasteurized cheese, and water.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

More studies need to be developed. In 2013, active monitoring programmes have been performed in broilers, cattle and pigs (national surveys). In 2014 only has been performed in broilers and fattening turkeys and will be performed in cattle and pigs in 2015.

Recent actions taken to control the zoonoses

Monitoring of the zoonoses according to Council Directive 2003/99/EEC.

3.2.2 Campylobacter in foodstuffs

3.2.2.1 Thermophilic Campylobacter spp., unspecified in food - Meat from broilers (*Gallus gallus*)

Monitoring system

Sampling strategy

At slaughterhouse and cutting plant

The activities are made according to Regulation (EC) no 178/2002. (i.e. rapid alert system, traceability of food, feed, food-producing animals and all substances incorporated into foodstuffs) must be established at all stages of production, processing and distribution. To this end, business operators are required to apply appropriate systems and procedures.

Frequency of the sampling

At meat processing plant

Sampling distributed evenly throughout the year

At retail

Sampling distributed evenly throughout the year

Type of specimen taken

Diagnostic/analytical methods used

3.2.3 Campylobacter in animals

3.2.3.1 Campylobacter spp., unspecified in animal - Turkeys - fattening flocks - Monitoring - EFSA specifications

Monitoring system

Sampling strategy

Samples have been taken randomly (day of sampling each month) in 7 slaughterhouses (distribution of the samples according to capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative (94%) of the total volume of sacrifice of the country.

Frequency of the sampling

between January and December

Type of specimen taken

Caecum

Diagnostic/analytical methods used

isolation in agar mCCDA(Oxoid) and identification by PCR multiplex.

Vaccination policy

doesn't exist

Other preventive measures than vaccination in place

biosecurity measures, implementation of good hygiene practices

Control program/mechanisms

The control program/strategies in place

doesn't exist

3.2.3.2 Thermophilic Campylobacter spp., unspecified in animal - Cattle (bovine animals)

Monitoring system

Sampling strategy

Samples have been taken randomly (day of sampling each month) in 18 slaughterhouses (distribution of the samples according to the capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative of the total volume of sacrifice of the country (52,8%).

Frequency of the sampling

Two faecal samples at colon level have been taken in all the slaughter batches in the day of sampling, with a maximum of 30 batches by slaughterhouse and day of sampling. Each batch belonged to different holdings. A total of 464 samples have been taken, belonging to 232 slaughter batches and 232 different holdings. Faeces were taken from the colon, refrigerated immediately and sent to the laboratory and analyzed within 24 hours. Sampling from April to October 2013.

Type of specimen taken

Faeces

Methods of sampling (description of sampling techniques)

Faeces were taken from the colon, refrigerated immediately and sent to the laboratory and analyzed before 24 hours.

Case definition

One slaughter batch was considered as positive if isolation of *Campylobacter* spp. by culture and identification by PCR

Diagnostic/analytical methods used

Isolation in agar mCCDA (Oxoid) and agar Campyfood (bioMerieux) and identification by PCR multiplex.

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years. Then, a new monitoring programme will be implemented in 2015.

3.2.3.3 Thermophilic *Campylobacter* spp., unspecified in animal - Pigs - fattening pigs

Monitoring system

Sampling strategy

Frequency of the sampling

2 faecal samples by slaughter batch with 10 animals or more, with a maximum of 30 slaughter batches by slaughterhouse and day of sampling. Each batch belonged to different herds. Sampling has been performed in 19 slaughterhouses, representing an important part of all the fattening pigs sacrificed in Spain (53%). A total of 460 samples have been taken, belonging to 230 slaughter batches and 230 different holdings. Samples were refrigerated immediately and sent to the laboratory and analyzed within 24 hours. Samples taken from April to October 2013

Type of specimen taken

Faeces

Methods of sampling (description of sampling techniques)

2 faecal material samples by slaughter batch and by holding

Case definition

a slaughter batch is considered as positive if isolation by bacteriological method and PCR identification

Diagnostic/analytical methods used

isolation in agar mCCDA(Oxoid) and agar Campyfood(bioMerieux) and identification by PCR multiplex

Vaccination policy

Doesn't exist

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years, then the new one will be performed in 2015.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

More studies need to be developed

3.2.3.4 Thermophilic Campylobacter spp., unspecified in animal - Gallus gallus (fowl)

Monitoring system

Sampling strategy

Samples have been taken randomly (day of sampling each month) in 27 slaughterhouses (distribution of the samples according to capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative (63%) of the total volume of sacrifice of the country.

Frequency of the sampling

At slaughter

between January and December

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Vaccination policy

doesn't exist

Other preventive measures than vaccination in place

biosecurity measures, implementation of good hygiene practices

Control program/mechanisms

The control program/strategies in place

doesn't exist

Results of the investigation

Number of slaughter batches tested: 500Number of slaughter batches positive: 127 C. jejuni and 140 C. coli; 44 isolates of C. jejuni were non-typable and the AST was not possible to be performed.

National evaluation of the recent situation, the trends and sources of infection

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

More studies need to be performed

3.3 LISTERIOSIS

3.3.1 General evaluation of the national situation

3.3.1.1 Listeria - general evaluation

History of the disease and/or infection in the country

Listeria monocytogenes has been recognised as a human pathogen for more than 50 years. It causes invasive illness mainly in certain well defined high-risk groups, including immunocompromised persons, pregnant women and neonates. However listeriosis can occur in otherwise healthy individuals, particularly in the setting of an outbreak. The public health importance of listeriosis is not always recognised particularly because listeriosis is a relatively rare disease compared to other common food-borne illnesses such as salmonellosis. Also listeriosis is a disease that clinically affects cattle, but mainly ewes in Spain.

National evaluation of the recent situation, the trends and sources of infection

Listeria is a serious food safety issue, particularly for pregnant women, the elderly, and those who are immunocompromised in Spain. In 2012 the number of reported human cases was 107.

Recent actions taken to control the zoonoses

The activities are made according to Regulation (EC) 178/2002. (i.e. rapid alert system, traceability of food, feed, food-producing animals and all substances incorporated into foodstuffs). must be established at all stages of production, processing and distribution. To this end, business operators are required to apply appropriate systems and procedures. Sampling is distributed evenly throughout the year.

Additional information

Diagnostic methods used in food : Bacteriological method: ISO 11290-2_2004.

3.4 E. COLI INFECTIONS

3.4.1 General evaluation of the national situation

3.4.1.1 Verotoxigenic E. coli (VTEC) - general evaluation

History of the disease and/or infection in the country

Verotoxigenic Escherichia coli have emerged as foodborne pathogens which can cause severe and potentially fatal illness. Rumants, specially cattle and sheep, have been implicated as the principal reservoir of VTEC. Transmission happened through consumption of undercooked meat, unpasteurized dairy products, vegetables or water contaminated by rumiant faeces. In 2007-2011 and 2013 national active monitoring programmes have been performed in young cattle 1-2 years old at slaughterhouse under a herd based approach. The next monitoring programme will be implemented in 2015.

National evaluation of the recent situation, the trends and sources of infection

In cattle, the percentage of animals colonized by strain O157:H7 has been similar in last monitoring programmes. Raw beef products are the main source of infection. Small rumants may also represent a source of transmission of VTEC to humans.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

The high percentage of animals colonized by strain O157:H7 in last years agree with growing of human incidence, but outbreaks of the disease are lower at the moment.

Recent actions taken to control the zoonoses

Surveillance of the disease according to Directive 2003/99/EEC. National monitoring programmes 2007-2011 and 2013 in young cattle 1-2 years old. Compulsory and voluntary monitoring programmes in raw meat of different species of animals, minced meat and meat products, other animal origin products, vegetables and others products.

Additional information

Diagnostic methods used in food:- Bacteriological method: ISO 16.654:2001.- Method ELISA- PCR-Bax

3.4.2 Escherichia coli, pathogenic in animals

3.4.2.1 Verotoxigenic E. coli (VTEC) in animal - Cattle (bovine animals)

Monitoring system

Sampling strategy

Samples have been taken randomly (day of sampling each month) in 18 slaughterhouses (distribution of the number of samples according to the capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative of the total volume of sacrifice of the country (around 52,8%) in the year 2013.

Frequency of the sampling

Animals at slaughter (herd based approach)

from April to October 2013.

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Vaccination policy

Control program/mechanisms

The control program/strategies in place

Recent actions taken to control the zoonoses

Results of the investigation

Number of slaughter batches analyzed: 150Positive : 23 VTEC in 2013.slaughter batch prevalence: 15,4%

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years. The, the next monitoring programme will be performed in 2015.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

3.5 YERSINIOSIS

3.5.1 General evaluation of the national situation

3.5.1.1 Yersinia - general evaluation

History of the disease and/or infection in the country

Microbiolgical Surveillance System was the Spanish surveillance system for epidemiological surveillance of yersinia infection in humans. It is based on the number of incident cases sent by hospital laboratories to Microbiological Information System (National Centre of Epidemiology).

National evaluation of the recent situation, the trends and sources of infection

The number of Yersinia enterocolitica human cases reported to the Microbiological Information System was 220 in 2012, versus 264 cases in 2011. At animal level, an active monitoring programme in fattening pigs at slaughter in 2013 detected Y. enterocolitica in 38,7% of the slaughter batches tested. All the strains belonged to biotype 4 serotype O:3.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

Animals are the main source of Yersinia. Fecal wastes from animals (particularly pigs) may contaminate water, milk and foods and become a source of infection for people or other animals.

Recent actions taken to control the zoonoses

The activities are made according to Regulation (EC) no 178/2002. (i.e. rapid alert system, traceability of food, feed, food-producing animals and all substances incorporated into foodstuffs). Controls must be established at all stages of production, processing and distribution. To this end, business operators are required to apply appropriate systems and procedures. At animal level, active monitoring programmes have been performed in pigs at slaughterhouse in 2007-2011 and 2013. The next one will be performed in 2015.

3.5.2 Yersinia in animals

3.5.2.1 Yersinia in animal - Pigs

Monitoring system

Sampling strategy

Animals at slaughter (herd based approach)

Samples have been taken randomly (day of each month) in 19 slaughterhouses (distribution of the number of samples according to the capacity of sacrifice of each slaughterhouse) placed in different regions of Spain and representative of the total volume of sacrifice of the country (53%) in the year 2013.

Frequency of the sampling

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

Results of the investigation

Fattening pigs at slaughterhouses: Tested slaughter batches: 230Positive: 89Slaughter batch prevalence: 38,7% Yersinia enterocolitica in 2013.

National evaluation of the recent situation, the trends and sources of infection

The monitoring programme will be implemented each 2 years. Then, the next monitoring programme will be performed in 2015.

3.6 TRICHI NELLOSIS

3.6.1 General evaluation of the national situation

3.6.1.1 Trichinella - general evaluation

History of the disease and/or infection in the country

Trichinellosis is a notifiable zoonosis, which causes two to three outbreaks per year in Spain. In 1995, the National Network of Epidemiological Surveillance (NNES) developed a standard protocol to detect every single case of trichinellosis, and notify the health authorities as quickly as possible when an outbreak occurs.

National evaluation of the recent situation, the trends and sources of infection

Sources of infection are mainly associated to the consume of meat and raw meat products of wild boars killed in hunting or pigs slaughtered at home and which carcasses has not been examined post-mortem.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

Most cases are caused by *Trichinella spiralis*. *Trichinella britovi* has previously been associated with outbreaks due to the consumption of boar meat, and meat from other wild animals but in the last years *T. britovi* was associated with pork meat and transmitted through the consumption of meat from a domestic pig.

Recent actions taken to control the zoonoses

The activities against this zoonoses are the Official Control: Examination of fresh meat and killed in hunting according to European legislation in force: Commission Regulation (EC) Number 2075/2005 of December 5, 2005 laying down specific rules on official controls for trichinella in meat and Commission Regulation (EC) Number 1665/2006 amending Comission Regulation (EC) Number 2075/2005). Domestic killing for self consumption and wild game meat to be sold at retail is regulated by the Spanish Royal Decree 640/2006, of May 26, 2006, laying down specific implementation conditions of the Communities rules concerning hygiene subjects, as well as foodstuff's production and commercialisation. According to article seven of the Commission Regulation (EC) Number 2075/2005 of December 5, 2005, laying down specific rules on official controls for *Trichinella* in meat, Spain has prepared a contingency plan outlining all action to be taken when samples referred to in articles 2 and 16 test are positive to *Trichinella*. This plan includes details covering: (a) traceability of infested carcass(s); (b) measures for dealing with infested carcass(s) and parts thereof; (c) investigation of the source of investigation and any spreading among wildlife; (d) any measures to be taken at retail or consumer level; (e) measures to be taken where the infested carcass(s) cannot be identified at the slaughterhouse; (f) determination of the *Trichinella* species involved. In Spain the *Trichinella* examination is compulsory for meat from *Trichinella* susceptible species, including domestic killing for self-consumption.

3.7 ECHINOCOCCOSIS

3.7.1 General evaluation of the national situation

3.7.1.1 Echinococcus - general evaluation

History of the disease and/or infection in the country

Hydatidosis is an endemic disease in Spain, mainly in regions with extensive systems of animal production. Human hydatidosis has been a Mandatory Notifiable disease since 1982, year in which were communicated around 2,000 cases. Royal Decree 2210/1995, laying down the National Epidemiologic Surveillance Network, classify hydatidosis as an endemic disease at regional frame. In 80s many regions started to set up a control programme based in control of animal hydatidosis and in general peoples health education and focused in professionals related with animals and at school level. Similar control programmes have been developed in other Autonomous Communities. The implementation of these control programmes got good results in the decrease of the incidence of the disease. Routine post-mortem examination at slaughterhouse has been carried out according to european legislation in force (Hygiene Package).

National evaluation of the recent situation, the trends and sources of infection

Control programmes in endemic regions got good results in the decrease of the disease at human level. Main source of infection in Spain is cycle between sheep, dog and humans. The epidemiological surveillance of human CE was initiated in the 1950s by the provincial health government authorities, through an active search of cases with individualized information. In 1982 CE was included in the Spanish list of compulsory notifiable diseases (CND), being recorded at national level until 1996.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

Higher incidence values of human cases are situated in regions with the highest census of sheep and goats.

Recent actions taken to control the zoonoses

Surveillance according to Directive 2003/99/EEC. Control programmes in endemic regions. Inclusion in National Epidemiology Surveillance Network according to Royal Decree 2210/1995. The activities against this zoonoses are the Official Control in fresh meat according to European Legislation in force (Hygiene package).

3.8 RABIES

3.8.1 General evaluation of the national situation

3.8.1.1 Lyssavirus (rabies) - general evaluation

History of the disease and/or infection in the country

Paralytic and furious forms of rabies are described in the second book of the Hunting Agreement in the time of King Alfonso XI (1312-1350). The Royal Assembly of Health publication of 23 November 1786 adopted measures to avoid transmission of rabies controlling movement of dogs and cats. Royal Order of 1863 describes "measures of preservation that one has to follow in each case where the bite has been from a supposed rabid animal" and also set down the measures against rabies in animals, which were to be adopted by Local Authorities. At the beginning of the 20th century the Law of 18 December 1914 and Regulation of 4 June 1915 are approved to prevent the transmission of human rabies. During the 1940s the first statistics on animal rabies appeared (513 dog cases in 1944 and 24 human cases). On 12 May 1947 the Ministry of Agriculture issued a General Order establishing the measures to be taken against rabies and a second Order of 1948 established the norms for animal vaccination and control. During the 1950s the first mass dog vaccination campaigns took place. The Epizootics Law of 20 December 1952 established the general regulations of the anti-rabies programme. Urban rabies has been the main epidemiological form in the history of the disease in Spain, with dogs as reservoir of the infection. Spain is free of land rabies since 1966, with exception of Ceuta and Melilla, that have a regular notification of animal cases of rabies by their situation in North Africa, where rabies is endemic. In peninsular territory an imported outbreak was reported in 1975 in the province of Málaga by introduction of dogs coming from North Africa. This outbreak ended in 1977 with 122 animals infected (dogs and cats, and 2 foxes) and one case of human rabies. Since 1979 only sporadic cases by EBLV in bats (*Eptesicus serotinus* and *Eptesicus isabellinus*) have been reported in peninsular territory. In June 2013, a positive dog illegally imported from North Africa was confirmed on rabies (RABV) in Spain mainland (Castilla-La Mancha region). According to the Action Plan in rabies, Spain declared the Alert Level 1 for six months, with increased control measures in the risk area. This control measures included mandatory vaccination of dogs, cats and ferrets, surveillance of animal contacts, control of stray animals, control of cadavers of domestic and wild carnivores and movement restrictions. In 2014, an imported human case from Morocco was detected in the Peninsula. The patient was a 46-year-old woman with residence in Spain, who was bitten by a dog while she was visiting her relatives in Morocco.

National evaluation of the recent situation, the trends and sources of infection

Since 1978 Spanish mainland and islands remain free of rabies in terrestrial mammals. Only a few cases of EBL have been reported in bats. These data show that the main source and risk for the apparition of cases of rabies in Spain is the importation of animals with the infection from Morocco and other countries of North Africa.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

Since 1975 no human cases with origin in peninsular territory and islands have been reported.

Recent actions taken to control the zoonoses

Compulsory surveillance of the disease according to article 4 of Directive 2003/99/EEC, came into force by Royal Decree 1940/2004. Compulsory vaccination of dogs in 12 autonomous communities, Ceuta and Melilla. Voluntary in the rest. Studies including active surveillance of LB-1 in bats. Information to the citizens about no manipulation of bats. An Action Plan has been approved, and includes risk evaluation, surveillance, mechanisms to control and a response protocol with four alert levels.

Additional information

In 2014, a fatal human case was imported from Morocco. The patient was a 46-year-old woman who was bitten by a dog while she was visiting her relatives in Morocco. She visited the hospital in Spain several months after the bite. The diagnosis was performed by the Spanish National Reference Laboratory on 30 April. The strain identified was similar to those circulating in North-Africa. The patient died on 20 May.

3.8.2 Lyssavirus (rabies) in animals

3.8.2.1 Lyssavirus (rabies) in animal - Dogs

Monitoring system

Sampling strategy

Sampling strategy is targeted at 4 levels:1. Apparently healthy terrestrial mammals that injure a person and die into the quarantine (kept under observation) period of 14 days or if the animal is suspected to be rabid (euthanasia).Samples are taken by competent authority. Passive surveillance2.Dogs and cats imported from third countries not included in part 1 and 2 of Annex II of Council Regulation(EC) No 577/2013 need a neutralising antibody titration at least equal to 0,5 IU/ml carried out in an approved laboratory to enter into Spain according to Council Regulation (EC) No 576/20133.Dogs and cats that are going to travel to United Kingdom, Ireland, Sweeden, Norwey and Malta.Samples are taken by private clinics and analisys performed by an approved laboratory 4. Studies including active surveillance of LB in bats

Frequency of the sampling

Indeterminated

Type of specimen taken

Brain, Blood, Saliva

Methods of sampling (description of sampling techniques)

Brain of dead or sacrificed animals have to be sent to National Reference Laboratory following a protocol of sending.The sample has to be taken with sterility, be submerged in salinum serum and glicerine in 50% solution and envoided refrigerated quickly. Blood and serum(0,5 ml minimun) have to be sent following a protocol, by a quick transport service refrigerated or frozen.

Case definition

According to Decision No. 2119/98/EC of the European Parliament and of the Council, Commission Decision 2002/253/EC and Commission Decision 2002/543/EC

Diagnostic/analytical methods used

Fluorescent Antibody Test (FAT), Polymerase Chain Reaction followed by DNA sequencing genomic areas, ELISA

Vaccination policy

Compulsory vaccination of dogs in 12 regions, Ceuta and Melilla.Voluntary vaccination of dogs in 5 regions.

Other preventive measures than vaccination in place

Control of animals coming from third countries not included in part 1 and 2 of Annex II of Council Regulation(EC) No 577/2013 Identification and registration of dogs.Pick up of stray dogs by council town authorities.

Control program/mechanisms

The control program/strategies in place

Several regional prevention programmes. Control of imports and exports according to Council Regulation(EC) No 576/2013 and Regulation(EC) No 577/2013

Recent actions taken to control the zoonoses

Imports of third countries not included in part 1 and 2 of Annex II of Council Regulation(EC) No 577/2013 An Action Plan has been approved in 2010, and includes risk evaluation, surveillance, mechanisms to control and a response protocol with four alert levels.

Measures in case of the positive findings or single cases

Mandatory Notifiable disease Royal Decree 2210/1995, December 25th, by Epidemiological Surveillance National Net is created. Oficial Notification of the disease Epidemiologic survey Cases in Spain (Melilla) are imported from third countries

Notification system in place

Since 1952, at least, by Epizootic Law. At the moment by Animal Health Law 8/2003.

Results of the investigation

Investigations of the human contacts with positive cases

All the people bitten by a suspected animal are investigated following the protocol " Rules of procedures in case of animal aggressions", published in 2012. According to the epidemiological situation and the type of contact with the suspected animal, the decision about the application of complete treatment (vaccine and Ig) is taken.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

High

Additional information

In 2013 was updated the protocol " Rules of procedures in case of animal aggressions", that includes risk assessment, actions to be taken after a risk exposition and treatment after a risk exposition and the "Action Plan for rabies in animals" that includes risk evaluation, surveillance, mechanisms to control and a response protocol with four alert levels.

3.9 STAPHYLOCOCCUS AUREUS METICILLIN RESISTANT (MRSA) INFECTION

3.9.1 Staphylococcus in animals

3.9.1.1 Staphylococcus in animal

Monitoring system

Sampling strategy

Frequency of the sampling

Type of specimen taken

Methods of sampling (description of sampling techniques)

Case definition

Diagnostic/analytical methods used

3.10 Q-FEVER

3.10.1 General evaluation of the national situation

3.10.1.1 Coxiella (Q-fever) - general evaluation

History of the disease and/or infection in the country

Q fever is a zoonosis with widely extended in the world. In Spain the first cases were documented in 1949.

National evaluation of the recent situation, the trends and sources of infection

Q fever cases and outbreak in Spain are reported to Epidemiological Notifiable Disease Surveillance System (outbreak) (NDDS) and Microbiological Information System (SIM)

3.11 WEST NILE VIRUS INFECTIONS

3.11.1 West Nile Virus in animals

3.11.1.1 West Nile Virus in animal

Monitoring system

Sampling strategy

Passive and active surveillance is undertaken on wild birds, as well as vector surveillance and active and passive surveillance in horses

Frequency of the sampling

Passive surveillance is conducted all along the year. Active surveillance frequency is risk based determined and always on the period of vector activity (March-November)

Type of specimen taken

blood serum, céfalorraquídean liquid, organs

Methods of sampling (description of sampling techniques)

Active surveillance on wild birds: Virus isolation on animals dead during their stay on a recovery center Serological sampling on zoological parks to detect seroconversion Capture-recapture based surveillance on wetlands. Passive surveillance on wild birds is conducted on birds found dead apparently not due to other causes. On this case, kidney, brain and heart are sampled. Passive surveillance on horses located in risk areas. Samples of serum and cefalorraquidean liquid are taken for antibody and direct detection respectively. On those animals with clinical symptomatology brain, kidney and heart samples will be taken. Active surveillance on horses When results of the surveillance in wild birds determine virus circulation on the area. Samples of serum are taken for antibody detection. Vector monitoring of presence with specific traps and direct detection of the virus.

Case definition

Any horse showing nervous signs compatible with WNV with IgM positive results by ELISA or any RT-PCR positive results in samples of brain, heart and kidney and cefalorraquidean liquid.

Diagnostic/analytical methods used

Direct detection: RT-PCR method. Serological test: ELISA IgM test and ELISA IgG test. The sero-neutralisation allows discriminating among infections by different flavivirus and is used as confirmation technique.

Vaccination policy

Vaccination is recommended as a measure of prevention. In case of a huge number of affected animals, vaccination is included on contingency plan as a possible measure of control.

Other preventive measures than vaccination in place

.In case of suspicion, active sampling will be added .Clinical surveillance is undertaken on horses mainly in those farms located in wetlands and might be up to 20 km distance to the wetland. Strengthening of wild birds surveillance. Vector control measures and use of repellents.

Control program/mechanisms

The control program/strategies in place

Surveillance actions will be taken according to the level of risk. Level 1 Wild birds and entomological surveillance Level 2 When virus circulation has been proved on birds and mosquitoes, active horses surveillance will be added. Results and a summary about the execution of the plan are sent every year, to the Ministry of Agriculture, Food and Environment Affairs from the different Autonomous Communities carrying out this plan.

Recent actions taken to control the zoonoses

When virus circulation is detected either in horses or birds, animal health authorities will communicate those results to public health authorities, so that measures to prevent the transmission to humans can be taken.

Suggestions to the European Union for the actions to be taken

Public education to reduce the risk of transmission: prevent exposure to mosquitoes during the hours of activity, repellent use and mosquito nets protection on houses. Information through a protocol distributed among primary care doctors and health workers in risk areas.

Measures in case of the positive findings or single cases

Surveillance increased in farms with a confirmed case. Epidemiological inquiry, census of horses and inspection of equine farms nearby. Surveillance in wild birds is strengthened.

Notification system in place

Based on the Council Directive 82/894/EEC on the notification of animal diseases within the Community and subsequent amendments transposed in Spain by Real Decreto 617/2007, of May 16, which is establishing the list of diseases notifiable animal and gives the rules for notification. Outbreaks are notified to through national database, RASVE and directly transmitted to ADNS. WAHID notification is done when necessary.

National evaluation of the recent situation, the trends and sources of infection

The future scenario is the maintenance of WNV circulation in the area where it has been notified in previous years, with a possible extension to other areas where ecological conditions are favorable.

Relevance of the findings in animals to findings in foodstuffs and to human cases (as a source of infection)

It's not relevant in foodstuffs. In terms of human morbidity and mortality, WNV infections are frequently asymptomatic and probability of infection is considered very low. Horses are not considered a source of infection for humans.

3.12 ESCHERICHIA COLI, NON-PATHOGENIC

3.12.1 General evaluation of the national situation

3.12.1.1 Escherichia coli, non-pathogenic - general evaluation

History of the disease and/or infection in the country

E. coli cause many infections in humans, with intestinal and extra-intestinal forms. In production animals E. coli diseases are very frequent, mainly in newborns or animals few days old of cattle, pork and sheep. Problems are often too in farms of poultry and rabbits. Several cases and outbreaks of diarrhea for Enteropathogenic E. coli have been detected since 60s, but these focus have reduced importantly in last decades. Serotypes in rabbits or ruminants are different than human ones. In Spain, the main serotype in rabbits is O103:H2. E. coli Enterotoxicogenic are more frequent associated with focus of gastroenteritis in humans, by consume of water and animal products. But predominant human serotypes in Spain (O25:H-; O153:H45; O169:H41) are different than the ones that causes diarrhea in animals. In piglets predominant serotypes are O138:K81:H14; O141:K85ab:H-; O149:K91:H10; O157:H-.

National evaluation of the recent situation, the trends and sources of infection

In production animals diseases by E. coli are very frequent. Although E. coli strains that cause infections in humans and animals can share many virulence factors, they often show different serotypes. Therefore, E. coli strains pathogenic for animals are infrequent to produce infections in humans, but it is proved that animals can be a reservoir of Enteropathogenic E. coli for humans. Environment and water can also be a source of infection.

Relevance of the findings in animals, feedingstuffs and foodstuffs to human cases (as a source of infection)

It is very difficult to establish the relevance of findings as sources of infection, because E. coli is a very ubiquitous agent and strains pathogenic for animals are infrequent to produce infections in humans.

4 ANTIMICROBIAL RESISTANCE INFORMATION ON SPECIFIC ZOONOSES AND ZOONOTIC AGENTS

4.1 SALMONELLOSIS

4.1.1 Salmonella in animals

4.1.1.1 Antimicrobial resistance in Salmonella Cattle (bovine animals)

Sampling strategy used in monitoring

Frequency of the sampling

6 FOODBORNE OUTBREAKS

Foodborne outbreaks are incidences of two or more human cases of the same disease or infection where the cases are linked or are probably linked to the same food source. Situation, in which the observed human cases exceed the expected number of cases and where a same food source is suspected, is also indicative of a foodborne outbreak.

6.1 Outbreaks

6.1.1 Foodborne outbreaks

System in place for identification, epidemiological investigations and reporting of foodborne outbreaks

Royal Decree 2210/1995, December 25, by Epidemiological Surveillance National Net is created. Notifiable Disease Surveillance System (NDSS) In December of 1995 the National Network of Epidemiological Surveillance was created by law. During 1997 the protocols of statutory notification of diseases were approved and implemented in Spain. In Spain the Autonomous Regions have wide powers with respect to epidemiological surveillance and national decisions are usually taken by consensus. All practising doctors are obliged to notify, both those in the public health service and in private practice, and both those practising outside and within hospitals. On occasions the appearance of cases and outbreaks is detected by other means (from the mass media, from citizens complaints, etc.) and in these cases the information is checked and if confirmed it is incorporated into the system at the corresponding level. The notification may be carried out using a variety of systems: mail, fax, telephone, e-mail, etc. Presently all the regions (and in many cases levels below) transmit the data by e-mail. A network is being developed for the National Epidemiological Surveillance Network which will permit the flow of data from the local level. The notification of outbreaks is mandatory and standardised. All the outbreaks must be reported immediately at the regional level. At the national level it is obligatory to report immediately only those outbreaks which, by law, are defined as being supra-community (considered to be of national interest) in order to facilitate their rapid control, where as the rest of the outbreaks are reported quarterly. Some regions have set up early warning systems in order to support doctors in reporting and investigating outbreaks. A similar national system is entering into operation. In 1997 a uniform outbreak reporting format (variables and codification) was developed in all of Spain in accordance with the one recommended by the WHO Programme. The report includes relevant information such as agent, food involved, place of consumption and contributing factors. The results of the statistical and epidemiological analysis are disseminated in annual reports. In addition they are published in epidemiological bulletins (national, regional and other). The weekly national epidemiological bulletin can be found at: <http://www.isciii.es/jsp/centros/epidemiologia/boletinesSemanal.jsp> In Spain the investigation of outbreaks of any diseases in humans is regulated within the National Epidemiological Surveillance Network. The responsibility and coordination falls on the epidemiologist charged with the investigation of each outbreak. In foodborne outbreaks this is also the case, but in close coordination with those who have to investigate.

Description of the types of outbreaks covered by the reporting:

The Spanish System covers all type of outbreaks, family, general and international outbreak

National evaluation of the reported outbreaks in the country:

Trends in numbers of outbreaks and numbers of human cases involved

In 2011 has been communicated 424 outbreaks, 165 of them with strong evidence. 1930 patients were involved in strong evidence outbreaks

Relevance of the different causative agents, food categories and the agent/food category combinations

Salmonella is the agent more frequently implied in foodborne outbreaks, emphasizing S. Enteritidis. The food implicated in its majority was eggs and egg products EggsMeatMilk

Relevance of the different type of places of food production and preparation in outbreaks

The place of consumption of the implicated food was, mainly, the familiar home, being the time of the year with more foodborne outbreaks the summer and contributor factor more frequent the inadequate temperature.

Control measures or other actions taken to improve the situation

Outbreak investigations as well as necessary control measures are carried out by the health authorities of the autonomous regions.

ANIMAL POPULATION TABLES

Table Susceptible animal population

| Animal species | Category of animals | Population | |
|-------------------------|---|------------|-------------|
| | | holding | animal |
| Cattle (bovine animals) | Cattle (bovine animals) - calves (under 1 year) (not specified) | 23.203 | 2.221.015 |
| | Cattle (bovine animals) - dairy cows and heifers | 22.857 | 867.903 |
| | Cattle (bovine animals) - meat production animals (not specified) | 86.938 | 2.058.818 |
| | Cattle (bovine animals) - mixed herds | 7.231 | 350.824 |
| | Cattle (bovine animals) (not specified) | 140.229 | 5.498.560 |
| Ducks | Ducks - breeding flocks, unspecified (not specified) | 114 | 275.896 |
| Gallus gallus (fowl) | Gallus gallus (fowl) - breeding flocks, unspecified (not specified) | 541 | 7.967.514 |
| | Gallus gallus (fowl) - broilers (not specified) | 4.938 | 243.030.373 |
| | Gallus gallus (fowl) - grandparent breeding flocks, unspecified - unspecified | 32 | 16.665.095 |
| | Gallus gallus (fowl) - laying hens (not specified) | 1.177 | 41.693.147 |
| | Gallus gallus (fowl) - parent breeding flocks, unspecified - unspecified | 356 | 28.179.031 |
| Geese | Geese - breeding flocks, unspecified (not specified) | 52 | 9.993 |
| Goats | Goats (not specified) | 74.645 | 6.340.535 |

Table HISTAMINE in food

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Method | Zoonoses | N of units tested | N of units positive |
|--|---------------|---------------|--------------------|--------------------|----------------------|----------------|-----------|-------------------|---------------------|
| Fish - Fishery products from fish species associated with a high amount of histidine - not enzyme matured - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 520 | 9 | >200 to <= 400 | Histamine | 520 | 4 |
| | | | | | | >100 to <= 200 | Histamine | 520 | 1 |
| | | | | | | > 400 | Histamine | 520 | 3 |
| | | | | | | <= 100 | Histamine | 520 | 1 |
| Fish - Fishery products which have undergone enzyme maturation treatment in brine - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 292 | 19 | >200 to <= 400 | Histamine | 292 | 6 |
| | | | | | | >100 to <= 200 | Histamine | 292 | 6 |
| | | | | | | > 400 | Histamine | 292 | 5 |
| | | | | | | <= 100 | Histamine | 292 | 2 |

Table LISTERIA in animal

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|--------------------|----------------------|-----------------------------|---------------------|
| Cattle (bovine animals) - dairy cows - Farm (not specified) - Spain - animal sample - foetus/stillbirth - Monitoring - passive - Official sampling - Suspect sampling | animal | 62 | 0 | Listeria - L. monocytogenes | 0 |

Table LISTERIA in food

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Method | Zoonoses | N of units tested | N of units positive |
|--|---------------|---------------|--------------------|--------------------|----------------------|---------------|-----------------------------|-------------------|---------------------|
| Bakery products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 393 | 4 | >100 ≤ 100 | Listeria - L. monocytogenes | 257 | 0 |
| Bakery products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 393 | 4 | detection | Listeria - L. monocytogenes | 208 | 4 |
| Cheeses made from cows' milk - soft and semi-soft - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 554 | 11 | >100 ≤ 100 | Listeria - L. monocytogenes | 162 | 1 |
| Cheeses made from cows' milk - soft and semi-soft - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 554 | 11 | detection | Listeria - L. monocytogenes | 392 | 9 |
| Cheeses made from sheep's milk - hard - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 282 | 8 | >100 ≤ 100 | Listeria - L. monocytogenes | 127 | 3 |
| Cheeses made from sheep's milk - hard - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 282 | 8 | detection | Listeria - L. monocytogenes | 196 | 5 |
| Crustaceans - unspecified - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 113 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 71 | 0 |
| Crustaceans - unspecified - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 113 | 0 | detection | Listeria - L. monocytogenes | 42 | 0 |
| Dairy products (excluding cheeses) - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 318 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 275 | 0 |
| Dairy products (excluding cheeses) - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 318 | 0 | detection | Listeria - L. monocytogenes | 43 | 0 |
| Dairy products (excluding cheeses) - butter - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 9 | 2 | >100 ≤ 100 | Listeria - L. monocytogenes | 0 | 0 |
| Dairy products (excluding cheeses) - butter - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 9 | 2 | detection | Listeria - L. monocytogenes | 9 | 2 |
| Dairy products (excluding cheeses) - cream - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 6 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 1 | 0 |
| Dairy products (excluding cheeses) - cream - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 6 | 0 | detection | Listeria - L. monocytogenes | 5 | 0 |
| Fish - smoked - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 346 | 26 | >100 ≤ 100 | Listeria - L. monocytogenes | 253 | 5 |
| Fish - smoked - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 346 | 26 | detection | Listeria - L. monocytogenes | 121 | 20 |
| Foodstuffs intended for special nutritional uses - dietary foods for special medical purposes - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 0 | 0 |
| Foodstuffs intended for special nutritional uses - dietary foods for special medical purposes - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 0 | detection | Listeria - L. monocytogenes | 2 | 0 |
| Fruits - pre-cut - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 68 | 2 | >100 ≤ 100 | Listeria - L. monocytogenes | 51 | 1 |
| Fruits - pre-cut - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 68 | 2 | detection | Listeria - L. monocytogenes | 17 | 1 |

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Method | Zoonoses | N of units tested | N of units positive |
|---|---------------|---------------|--------------------|--------------------|----------------------|---------------|-----------------------------|-------------------|---------------------|
| Infant formula - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 42 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 10 | 0 |
| Infant formula - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 42 | 0 | detection | Listeria - L. monocytogenes | 10 | 2 |
| Meat from bovine animals - fresh - Processing plant - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 1 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 0 | 0 |
| Meat from bovine animals - fresh - Processing plant - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 1 | 0 | detection | Listeria - L. monocytogenes | 1 | 0 |
| Meat from bovine animals - meat products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 90 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 50 | 0 |
| Meat from bovine animals - meat products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 90 | 0 | detection | Listeria - L. monocytogenes | 40 | 0 |
| Meat from broilers (Gallus gallus) - fresh - Processing plant - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 1 | >100 ≤ 100 | Listeria - L. monocytogenes | 1 | 0 |
| Meat from broilers (Gallus gallus) - fresh - Processing plant - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 1 | detection | Listeria - L. monocytogenes | 1 | 1 |
| Meat from broilers (Gallus gallus) - meat products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 95 | 0 | >100 ≤ 100 | Listeria - L. monocytogenes | 25 | 0 |
| Meat from broilers (Gallus gallus) - meat products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 95 | 0 | detection | Listeria - L. monocytogenes | 70 | 0 |

Table SALMONELLA in feed

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|--|---------------|---------------|--------------------|--------------------|----------------------|--|---------------------|
| Compound feedingstuffs for cattle - final product - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 114 | 3 | Salmonella - S. Typhimurium Salmonella - Salmonella spp., unspecified | 1 2 |
| Compound feedingstuffs for pigs - final product - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 91 | 10 | Salmonella - S. Typhimurium Salmonella - Salmonella spp., unspecified | 1 9 |
| Compound feedingstuffs for poultry (non specified) - final product - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 17 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Compound feedingstuffs for poultry, broilers - final product - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 16 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Compound feedingstuffs for poultry, laying hens - final product - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 53 | 5 | Salmonella - S. Enteritidis Salmonella - Salmonella spp., unspecified | 1 4 |
| Feed material of cereal grain origin - barley derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 19 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of cereal grain origin - maize derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 26 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of cereal grain origin - other cereal grain derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 5 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of cereal grain origin - wheat derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 20 | 1 | Salmonella - Salmonella spp., unspecified | 1 |
| Feed material of land animal origin - animal fat - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 6 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of land animal origin - blood meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 8 | 3 | Salmonella - Salmonella spp., unspecified | 3 |
| Feed material of land animal origin - dairy products - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 3 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of land animal origin - feather meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 12 | 2 | Salmonella - S. Enteritidis Salmonella - Salmonella spp., unspecified | 1 1 |
| Feed material of land animal origin - meat and bone meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 271 | 32 | Salmonella - Salmonella spp., unspecified | 32 |
| Feed material of land animal origin - meat meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 9 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of land animal origin - poultry offal meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 5 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of marine animal origin - fish meal - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 143 | 5 | Salmonella - Salmonella spp., unspecified | 5 |
| Feed material of oil seed or fruit origin - cotton seed derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 9 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of oil seed or fruit origin - rape seed derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 2 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Feed material of oil seed or fruit origin - soya (bean) derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 30 | 0 | Salmonella - Salmonella spp., unspecified | 0 |

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|--|---------------|---------------|--------------------|--------------------|----------------------|---|---------------------|
| Feed material of oil seed or fruit origin - sunflower seed derived - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 3 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Other feed material - forages and roughages - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 3 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Other feed material - legume seeds and similar products - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 3 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Other feed material - tubers, roots and similar products - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 12 | 0 | Salmonella - Salmonella spp., unspecified | 0 |
| Pet food - Feed mill - Spain - feed sample - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 38 | 2 | Salmonella - Salmonella spp., unspecified | 2 |

Table STAPHYLOCOCCAL ENTEROTOXINS in food

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|---------------|--------------------|--------------------|----------------------|-----------------------------|---------------------|
| Cheeses made from cows' milk - hard - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 15 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from cows' milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 34 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from cows' milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 82 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from goats' milk - hard - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from goats' milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 1 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from goats' milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 10 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from sheep's milk - hard - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 1 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from sheep's milk - hard - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 27 | 1 | Staphylococcal enterotoxins | 0 |
| Cheeses made from sheep's milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 5 | 0 | Staphylococcal enterotoxins | 0 |
| Cheeses made from sheep's milk - soft and semi-soft - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 6 | 0 | Staphylococcal enterotoxins | 0 |
| Dairy products (excluding cheeses) - milk powder and whey powder - Processing plant - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 0 | Staphylococcal enterotoxins | 0 |

Table STAPHYLOCOCCUS AUREUS METICILLIN RESISTANT (MRSA) in food

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|---------------|--------------------|--------------------|----------------------|---|---------------------|
| Meat from bovine animals - meat products - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 5 | 0 | Staphylococcus - S. aureus, meticillin resistant (MRSA) | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - MRSA, unspecified | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t011 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t034 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t108 | 0 |
| Meat from bovine animals - minced meat - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 3 | 0 | Staphylococcus - S. aureus, meticillin resistant (MRSA) | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - MRSA, unspecified | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t011 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t034 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t108 | 0 |
| Meat from broilers (Gallus gallus) - meat preparation - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 19 | 0 | Staphylococcus - S. aureus, meticillin resistant (MRSA) | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - MRSA, unspecified | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t011 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t034 | 0 |
| | | | | | | Staphylococcus - S. aureus, meticillin resistant (MRSA) - spa-type t108 | 0 |
| Meat from broilers (Gallus gallus) - meat products - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 3 | 0 | Staphylococcus - S. aureus, meticillin resistant (MRSA) | 0 |

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |

| Solipeds, domestic - horses - Farm (not specified) - Spain - animal sample - blood - Monitoring - passive - Official sampling - Suspect sampling | animal | Unknown | 39 | 8 | West Nile virus | 0 |
| | | | 49 | 8 | West Nile virus | 8 |
| Solipeds, domestic - horses - Farm (not specified) - Spain - animal sample - blood - Monitoring - passive - Official sampling - Suspect sampling | animal | Unknown | 10 | 0 | West Nile virus | 0 |

Table YERSINIA in animal

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|--------------------|----------------------|-------------------------------------|---------------------|
| Cattle (bovine animals) - Farm (not specified) - Spain - animal sample - faeces - Monitoring - passive - Official sampling - Suspect sampling | animal | 106 | 22 | Yersinia - <i>Y. enterocolitica</i> | 22 |

Table YERSINIA in food

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|---------------|--------------------|--------------------|----------------------|--|---------------------|
| Eggs - table eggs - - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | batch | 25 | Gram | 5 | 0 | Yersinia - <i>Y. enterocolitica</i> | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:3 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:9 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - <i>Y. enterocolitica</i> , unspecified | 0 |
| | | | | | | Yersinia - <i>Y. pseudotuberculosis</i> | 0 |
| | | | | | | Yersinia - <i>Yersinia</i> spp., unspecified | 0 |
| Meat from broilers (<i>Gallus gallus</i>) - fresh - Slaughterhouse - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 19 | 1 | Yersinia - <i>Y. enterocolitica</i> | 1 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:3 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:9 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - <i>Y. enterocolitica</i> , unspecified | 1 |
| | | | | | | Yersinia - <i>Y. pseudotuberculosis</i> | 0 |
| | | | | | | Yersinia - <i>Yersinia</i> spp., unspecified | 0 |
| Meat from other poultry species - fresh - Retail - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 2 | 1 | Yersinia - <i>Y. enterocolitica</i> | 1 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:3 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:9 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - <i>Y. enterocolitica</i> , unspecified | 1 |
| | | | | | | Yersinia - <i>Y. pseudotuberculosis</i> | 0 |
| | | | | | | Yersinia - <i>Yersinia</i> spp., unspecified | 0 |
| Meat from pig - carcase - Slaughterhouse - Unknown - food sample - meat - NOT AVAILABLE - Official sampling - Objective sampling | single | 25 | Gram | 1 | 0 | Yersinia - <i>Y. enterocolitica</i> | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:3 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:9 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - <i>Y. enterocolitica</i> , unspecified | 0 |
| | | | | | | Yersinia - <i>Y. pseudotuberculosis</i> | 0 |
| | | | | | | Yersinia - <i>Yersinia</i> spp., unspecified | 0 |
| Meat from pig - fresh - Processing plant - Unknown - food sample - meat - NOT AVAILABLE - Official sampling - Objective sampling | single | 25 | Gram | 17 | 10 | Yersinia - <i>Y. enterocolitica</i> | 10 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:3 | 1 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - O:9 | 0 |
| | | | | | | Yersinia - <i>Y. enterocolitica</i> - <i>Y. enterocolitica</i> , unspecified | 9 |

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|--|---------------|---------------|--------------------|--------------------|----------------------|---|---------------------|
| Meat from pig - fresh - Processing plant - Unknown - food sample - meat - NOT AVAILABLE - Official sampling - Objective sampling | single | 25 | Gram | 17 | 10 | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat from pig - fresh - Retail - Unknown - food sample - meat - NOT AVAILABLE - Official sampling - Objective sampling | single | 25 | Gram | 50 | 8 | Yersinia - Y. enterocolitica | 8 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 8 |
| | | | | | | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat from pig - meat products - Retail - Unknown - food sample - meat - NOT AVAILABLE - Official sampling - Objective sampling | single | 25 | Gram | 91 | 3 | Yersinia - Y. enterocolitica | 3 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 3 |
| | | | | | | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat from sheep - fresh - Retail - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 16 | 5 | Yersinia - Y. enterocolitica | 5 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 5 |
| | | | | | | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat from turkey - fresh - Slaughterhouse - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 12 | 3 | Yersinia - Y. enterocolitica | 3 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 3 |
| | | | | | | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat, mixed meat - meat preparation - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 94 | 17 | Yersinia - Y. enterocolitica | 17 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 17 |

| Matrix - Sampling stage - Sampling origin - Sample type - Sampling context - Sampler - Sampling strategy | Sampling unit | Sample weight | Sample weight unit | Total units tested | Total units positive | Zoonoses | N of units positive |
|---|---------------|---------------|--------------------|--------------------|----------------------|---|---------------------|
| Meat, mixed meat - meat preparation - - Unknown - food sample - meat - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 94 | 17 | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |
| Meat, mixed meat - meat products - Retail - Unknown - food sample (not specified) - Surveillance - Official sampling - Objective sampling | single | 25 | Gram | 19 | 0 | Yersinia - Y. enterocolitica | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:3 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - O:9 | 0 |
| | | | | | | Yersinia - Y. enterocolitica - Y. enterocolitica, unspecified | 0 |
| | | | | | | Yersinia - Y. pseudotuberculosis | 0 |
| | | | | | | Yersinia - Yersinia spp., unspecified | 0 |

FOODBORNE OUTBREAKS TABLES

Foodborne Outbreaks: summarized data

| Causative agent | Food vehicle | Outbreak strength | Strong | | | | Weak | | | |
|--|---|-------------------|-------------|---------------|----------------|----------|-------------|---------------|----------------|----------|
| | | | N outbreaks | N human cases | N hospitalized | N deaths | N outbreaks | N human cases | N hospitalized | N deaths |
| Adenovirus | Other foods | | | | | 1 | 10 | 0 | 0 | 0 |
| Anisakis - Anisakis spp., unspecified | Fish and fish products | | | | | 1 | 5 | 1 | 0 | 0 |
| Bacillus - <i>B. cereus</i> | Cereal products including rice and seeds/pulses (nuts, almonds) | 1 | 18 | 0 | 0 | | | | | |
| Bacteria - Other Bacterial agents | Other foods | | | | | 1 | 3 | 0 | 0 | 0 |
| | Vegetables and juices and other products thereof | 1 | 28 | 0 | 0 | | | | | |
| | Unknown | | | | | 1 | 2 | 2 | 0 | 0 |
| Calicivirus - norovirus (Norwalk-like virus) | Other foods | | | | | 1 | 14 | 0 | 0 | 0 |
| | Tap water, including well water | | | | | 1 | 16 | 0 | 0 | 0 |
| | Vegetables and juices and other products thereof | 4 | 207 | 6 | 0 | 1 | 2 | 0 | 0 | 0 |
| | Crustaceans, shellfish, molluscs and products thereof | 3 | 96 | 0 | 0 | 3 | 74 | 1 | 0 | 0 |
| | Other or mixed red meat and products thereof | 1 | 23 | 0 | 0 | | | | | |
| | Eggs and egg products | | | | | 1 | 29 | 1 | 0 | 0 |
| Campylobacter - <i>C. jejuni</i> | Unknown | | | | | 4 | 81 | 1 | 0 | 0 |
| | Other foods | | | | | 1 | 3 | 0 | 0 | 0 |
| | Broiler meat (<i>Gallus gallus</i>) and products thereof | 1 | 15 | 0 | 0 | 3 | 53 | 0 | 0 | 0 |
| | Bovine meat and products thereof | | | | | 1 | 3 | 2 | 0 | 0 |
| Chemical agents | Unknown | | | | | 2 | 21 | 0 | 0 | 0 |
| | Other foods | 1 | 3 | 0 | 0 | | | | | |
| | Sweets and chocolate | | | | | 1 | 2 | 0 | 0 | 0 |
| | Drinks, including bottled water | | | | | 1 | 2 | 2 | 0 | 0 |
| | Vegetables and juices and other products thereof | | | | | 1 | 9 | 0 | 0 | 0 |
| | Other or mixed red meat and products thereof | 1 | 10 | 0 | 0 | | | | | |
| Clostridium - <i>C. botulinum</i> | Eggs and egg products | | | | | 1 | 3 | 0 | 0 | 0 |
| | Other foods | 1 | 2 | 2 | 0 | | | | | |
| Clostridium - <i>C. perfringens</i> | Canned food products | 1 | 3 | 3 | 0 | | | | | |
| | Vegetables and juices and other products thereof | | | | | | | | | |
| | Tap water, including well water | 2 | 75 | 1 | 0 | | | | | |
| | Broiler meat (<i>Gallus gallus</i>) and products thereof | 1 | 22 | 0 | 0 | | | | | |
| | Other or mixed red meat and products thereof | 1 | 4 | 0 | 0 | | | | | |
| | Pig meat and products thereof | | | | | 2 | 68 | 0 | 0 | 0 |
| | Bovine meat and products thereof | 1 | 94 | 0 | 0 | | | | | |
| | Eggs and egg products | | | | | 1 | 23 | 0 | 0 | 0 |
| | Unknown | | | | | | 3 | 29 | 0 | 0 |
| Escherichia coli, pathogenic | Mixed food | 1 | 61 | 0 | 0 | | | | | |
| | Tap water, including well water | 1 | 49 | 0 | 0 | | | | | |

| Causative agent | Food vehicle | Outbreak strength | Strong | | | | Weak | | | |
|---|---|-------------------|-------------|---------------|----------------|----------|-------------|---------------|----------------|----------|
| | | | N outbreaks | N human cases | N hospitalized | N deaths | N | | N | |
| | | | | | | | N outbreaks | N human cases | N hospitalized | N deaths |
| Escherichia coli, pathogenic - Verotoxigenic E. coli (VTEC) | Milk | | 1 | 2 | 2 | 0 | | | | |
| | Unknown | | | | | | 1 | 3 | 1 | 0 |
| Histamine | Fish and fish products | | 18 | 84 | 3 | 0 | 9 | 34 | 0 | 0 |
| Listeria - L. monocytogenes | Vegetables and juices and other products thereof | | | | | | 1 | 3 | 3 | 0 |
| | Unknown | | | | | | 1 | 2 | 0 | 0 |
| Marine biotoxins - muscle-paralysing toxin | Crustaceans, shellfish, molluscs and products thereof | | 1 | 2 | 0 | 0 | | | | |
| Mushroom toxins | Vegetables and juices and other products thereof | | 10 | 24 | 18 | 0 | 1 | 2 | 2 | 0 |
| Rotavirus | Mixed food | | 1 | 5 | 1 | 0 | | | | |
| Salmonella - S. Enteritidis | Milk | | | | | | 1 | 3 | 1 | 0 |
| | Mixed food | | 2 | 179 | 9 | 0 | 1 | 10 | 1 | 0 |
| | Other foods | | | | | | 1 | 2 | 2 | 0 |
| | Bakery products | | 4 | 60 | 13 | 0 | 2 | 40 | 1 | 0 |
| | Cereal products including rice and seeds/pulses (nuts, almonds) | | 1 | 8 | 0 | 0 | | | | |
| | Crustaceans, shellfish, molluscs and products thereof | | 1 | 7 | 2 | 0 | 1 | 4 | 2 | 0 |
| | Other or mixed red meat and products thereof | | 1 | 2 | 0 | 0 | | | | |
| | Pig meat and products thereof | | 1 | 5 | 0 | 0 | | | | |
| | Eggs and egg products | | 20 | 212 | 63 | 0 | 24 | 350 | 78 | 0 |
| | Unknown | | | | | | 9 | 46 | 8 | 0 |
| Salmonella - S. group B | Broiler meat (Gallus gallus) and products thereof | | | | | | 1 | 5 | 3 | 0 |
| | Bovine meat and products thereof | | 1 | 3 | 0 | 0 | | | | |
| | Eggs and egg products | | | | | | 1 | 2 | 0 | 0 |
| | Unknown | | | | | | 1 | 3 | 1 | 0 |
| Salmonella - S. group D | Broiler meat (Gallus gallus) and products thereof | | 1 | 5 | 0 | 0 | 2 | 4 | 0 | 0 |
| | Eggs and egg products | | 2 | 10 | 1 | 0 | | | | |
| Salmonella - S. Typhimurium | Other foods | | 1 | 14 | 0 | 0 | | | | |
| | Other or mixed red meat and products thereof | | | | | | 1 | 6 | 2 | 0 |
| | Eggs and egg products | | 1 | 14 | 5 | 0 | 2 | 9 | 1 | 0 |
| | Cheese | | 1 | 95 | 25 | 0 | | | | |

ANTIMICROBIAL RESISTANCE TABLES FOR CAMPYLOBACTER

Table Antimicrobial susceptibility testing of Campylobacter - C. coli in Turkeys - fattening flocks (not specified)

Sampling Stage: Slaughterhouse

Sampling Type: animal sample - caecum

Sampling Context: Monitoring - EFSA specifications

Sampler: Official sampling

Sampling Strategy: Objective sampling

Programme Code: AMR MON

Analytical Method: Micromethod dilution (in microtiter plate) (not specified)

| AM substance | Aminoglycosides - Gentamicin | Aminoglycosides - Streptomycin | Fluoroquinolones - Ciprofloxacin | Macrolides - Erythromycin | Quinolones - Nalidixic acid | Tetracyclines - Tetracycline |

Table Antimicrobial susceptibility testing of *Salmonella* - S. Hadar in Turkeys - fattening flocks - before slaughter

Sampling Stage: Farm (not specified)

Sampling Type: animal sample - faeces

Sampling Context: Control and eradication

Sampler: Industry sampling

Sampling Strategy: Convenient sampling

Table Antimicrobial susceptibility testing of *Salmonella* - S. Hadar in Meat from broilers (*Gallus gallus*) - carcase (not specified)

Sampling Stage: Slaughterhouse

Sampling Type: food sample - neck skin

Sampling Context: Monitoring - EFSA specifications

Sampler: Official sampling

Sampling Strategy: Objective sampling

Programme Code: AMR MON

Analytical Method: Micromethod dilution (in microtiter plate) (not specified)
